

PORTFOLIO OBJECTIVE

This portfolio comprises a wide range of diversified investment vehicles including unit trusts, mutual funds and exchange traded funds (ETFs), whose managers aim to outperform their respective markets. Asset classes you could find in this portfolio are equities, government bonds, corporate bonds, alternatives, commodities and cash. Absolute return, multi-asset and property may all feature within the alternatives classification.

The portfolio seeks to generate aggressive capital growth over the long term (7 years or more), and can experience very high levels of volatility in both the short and long term. Portfolios typically comprise 100% equity, though weightings may deviate within set parameters, allowing managers to react to market conditions.

STRATEGIC V CURRENT ASSET ALLOCATION

TOP 10 ASSET ALLOCATION

PORTFOLIO ACTIVITY

Tactical asset allocation changes within the Active portfolios were to both the bond and the equity book across Q3, which helped to increase diversification as well as market capture within clients' portfolios. Within bonds, we invested into a fund which seeks, via signals to actively manage the relationship between bonds and inflation, to deliver outperformance but also protection should inflation surge back up. Likewise, more active bond funds were introduced in Q3 to help capture the positivity coming from the bond market. After August's volatility within the equity market, the Active portfolios added back to clients' equity positions with investments into global and US stocks to capture more of the market's recovery after the short sell-off.

QUARTERLY REVIEW

At the headline level for Q3, a 50/50 portfolio of market cap weighted global stocks and bonds delivered a performance gain in the region of 0.7%. Specifically, global stocks lost -0.3% and global bonds rallied +1.3%. Given this, one can see how client portfolios that owned more bonds than stocks did slightly better over Q3 and vice versa in Q2. The global bond market's 1.3% gain pared some of the previous six months' losses of 2.35%. Clearly, there has been a market step change in the performance of government bonds over Q3, which has been heavily influenced by the US finally starting to cut interest rates. This is a fantastic development in which many clients who are invested in bonds can finally start to see this part of their portfolio delivering profits. With American stocks powering the lion's share of investor returns, up 15% in the first six months of the year, Q3 was another marked step change in which the US stock market delivered -0.67%. Beneath the surface, investors were stepping back from buying those 7 mega-cap tech stocks, and instead investing in more attractive opportunities from across the global market rather than just the US, which was undoubtedly a positive development in Q3.

QUARTERLY OUTLOOK

Looking forward to Q4, with global inflation now convincingly below 3% and all major economies having cut interest rates by at least 0.25%, most investors have agreed that the inflation battle is, for now, won. This scenario of inflation coming down, economic growth proving resilient, and interest rates being cut, should see the equity and corporate bond market powering higher off the back of resilient economies and strong company earnings into Christmas. On the flip side, if we see corporate earnings contract and economic growth slow, we don't see a deep recession but something shallower, and importantly something which the investment community can look through without a broad stock market panic. Further, if the global economy slips into a steeper recession than predicted, central banks can cut interest rates down to the 1% range in short order, which should help to quickly stabilise the market and stimulate the global economy. If this happens, we see a large upside of more than 25% in government bonds which we would look to heavily overweight.
